

CONTENTS.

PART I.

METALLOGRAPHY CONSIDERED AS A METHOD OF ASSAY.

	PAGE
Definition	1
Subdivisions of metallography	3
Anatomical metallography	5
Bodies chemically homogeneous	5
Bodies chemically heterogeneous	9
Causes of error	17
Biological metallography	19
General considerations	19
Iron	21
Spiegeleisen	21
Alloys of silver and copper	22
Steels	29
Bronzes	36
Pathological metallography	49

PART II.

THE SCIENCE OF POLISHING.

(By F. OSMOND and A. CARTAUD.)

Grinding	59
Penetration	60
Scratches	65
Brittle amorphous bodies	65
Plastic amorphous bodies	71
Brittle crystalline bodies	73
Plastic crystalline bodies	76
Metallurgy	79

	PAGE
Finishing	84
Chemical developers	85
Mechanical developers	86
Scaling	101

PART III.

THE MICROGRAPHIC ANALYSIS OF CARBON STEELS.

CHAPTER I.

Rough polishing	104
Preliminary operations	104
General remarks on polishing	104
Preparatory polishing	105
Preparation of emery papers	106

CHAPTER II.

Fine polishing	110
Polishing in bas-relief	110
Polish-attack	112
Etching	114

CHAPTER III.

Apparatus employed for photomicrography	116
The microscope and accessories	116
Polishing machines	125

CHAPTER IV.

Practical applications of metallography	129
Introduction	129
Selection of specimens	130
Macrostructure	130
Grinding and polishing	132
Etching the specimens	134
Etching reagents used	134
Etching reagents recommended by Kourbatoff	134
Practical application	135
Tempered hardened steel	135
Distortion of metals when in the cold state	137
Heat treatment of steel	142

CONTENTS

	PAGE
Burnt steel	145
Steel wire for rope	146
Cast steel before and after forging	150
Case-hardening	153
Electric repairing of steel castings	155
Sulphur in pig-iron	157
Phosphorus in pig-iron	159
Combined carbon in pig-iron	162
Malleable cast-iron	164

CHAPTER V.

Primary constituents of carbon steels	166
Ferrite	166
Cementite and Pearlite	170
Sorbite	176
Martensite	181
Troostite	184
Austenite	187
Note on the relative softness of Austenite	191

CHAPTER VI.

Micrographic identification of constituents	194
---	-----

CHAPTER VII.

Detailed examination of selected steels	198
Steel with 0.02 per cent. carbon	202
Steel with 0.14 per cent. carbon	204
Forged metal	204
Influence of reheating	207
Influence of quenching	208
Steel with 0.45 per cent. carbon	214
Forged metal	214
Influence of reheating	215
Influence of quenching	219
(a) Heating to variable temperatures, followed by quenching from the same temperature in water at 15°	219
(b) Heating at a constant temperature (845°), followed by quenching from variable temperatures in water at 15°	225

	PAGE
(c) Heating at a constant temperature (825°), followed by quenching from a constant temperature (720°) in different media	228
(d) Influence of tempering	229
Steel with 1.25 per cent. carbon	231
Forged metal	231
Influence of reheating	232
Influence of quenching	234
Steel with 1.57 per cent. carbon	237
The natural cemented metal	237
Influence of quenching	237
(a) Negative quenching	237
(b) Positive quenching	237
Influence of tempering	239

CHAPTER VIII.

Segregation in steel and the phenomena of burning, overheating, and welding	243
Blowhole segregation	253
The burning and overheating of steel	258
Welding	263

CHAPTER IX.

The macrostructure of steel, sulphur printing and heat-tinting	266
Auto-sulphur printing	267
Heat-tinting	271

CHAPTER X.

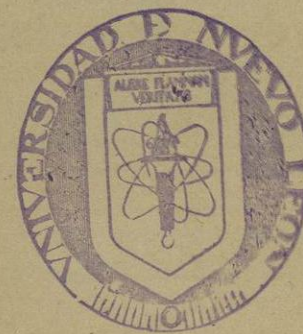

Conclusions	274
Theoretical conclusions	274
Steel with 0.14 per cent. carbon	277
Steel with 0.45 per cent. carbon	278
Steel with 0.85 per cent. carbon	278
Steel with 1.57 per cent. carbon	278
Practical conclusions	281

APPENDIX I.

Pure electro-deposited ferrite	283
--	-----

APPENDIX II.

	PAGE
The nomenclature of the microscopic substances and structures of steel and cast-iron	287
List of microscopic substances	288
Definitions and descriptions	290
Austenite	290
Cementite	294
Martensite	296
Ferrite	298
Osmondite	299
Ferronite	301
Hardenite	301
Pearlite	301
Graphite	303
Troostite	304
Sorbite	306
Manganese sulphide	307
Ferrous sulphide	307
Miscellaneous	307
INDEX	309

BIBLIOTECA
